

# Experience

- **HolidayPirates (October 2015 - March 2017)**

Worked maintaining the apps for the (at the moment) 9 markets it is present in.

- Built Search and Book completely in Swift 3.
- Built partner company Flynder's app.

- **Buena Onda (April 2013 - July 2015)**

- **Seahorse** ([Website](#))
- **Cornershop** ([Website](#))

Worked on these universal iOS Apps from the ground up, focused on the data layer side of things (Networking, Persistency, Data Models) as well as UI performance.

- **Fork (November 2011 - March 2012)**

Worked on several internal projects related to [Prey](#), the Control Panel and client apps.

**Relevant Languages:** Objective-C, Ruby, Javascript (Node.js), Applescript.

- **Welcu (September 2011 - October 2011)**

Created and developed an app used to check-in people and print labels at events using the platform ([App Store](#)).

**Relevant Tech:** QuartzCore, AVFoundation, ZXing, Third parties frameworks for printing.

- **Onda (February 2011 to October 2014)**

Under this company I and a designer created our own Apps. With these as our testing grounds we tried and learned many things.

- **Cuanto Falta:** Know when (and if!) the bus is coming in [Transantiago](#). The first iOS app I worked on and created. This app features custom UI and used a Node.js backend created exclusively for it. ([App Store](#))

**Relevant Tech:** QuartzCore, StoreKit, MapKit, CoreLocation, restify (node.js backend)

- **Postcards:** A tumblr client for your dashboard. ([App Store](#))

# Open Source

- **OLImageView**

If your company uses Slack, then you have probably seen this code in action!. (It's also part of the magic behind Postcards) - [Source @ Github](#)

- **Cocoapods Prune Localizations**

Every localized pod added to your project has translations (and images!) in languages you don't need; This is for you. - [Source @ Github](#)

- **Batched Handlers**

Parts of your app call asynchronous methods, this projects helps you collect all those handler blocks so you can do the work only once and call them all back easily. - [Source @ Github](#)

## Other Projects

---

I have also contributed to several other projects such as:

[Cocoapods](#), [AFNetworking](#), [Prey](#), [restify](#)
